Time-reversal odd

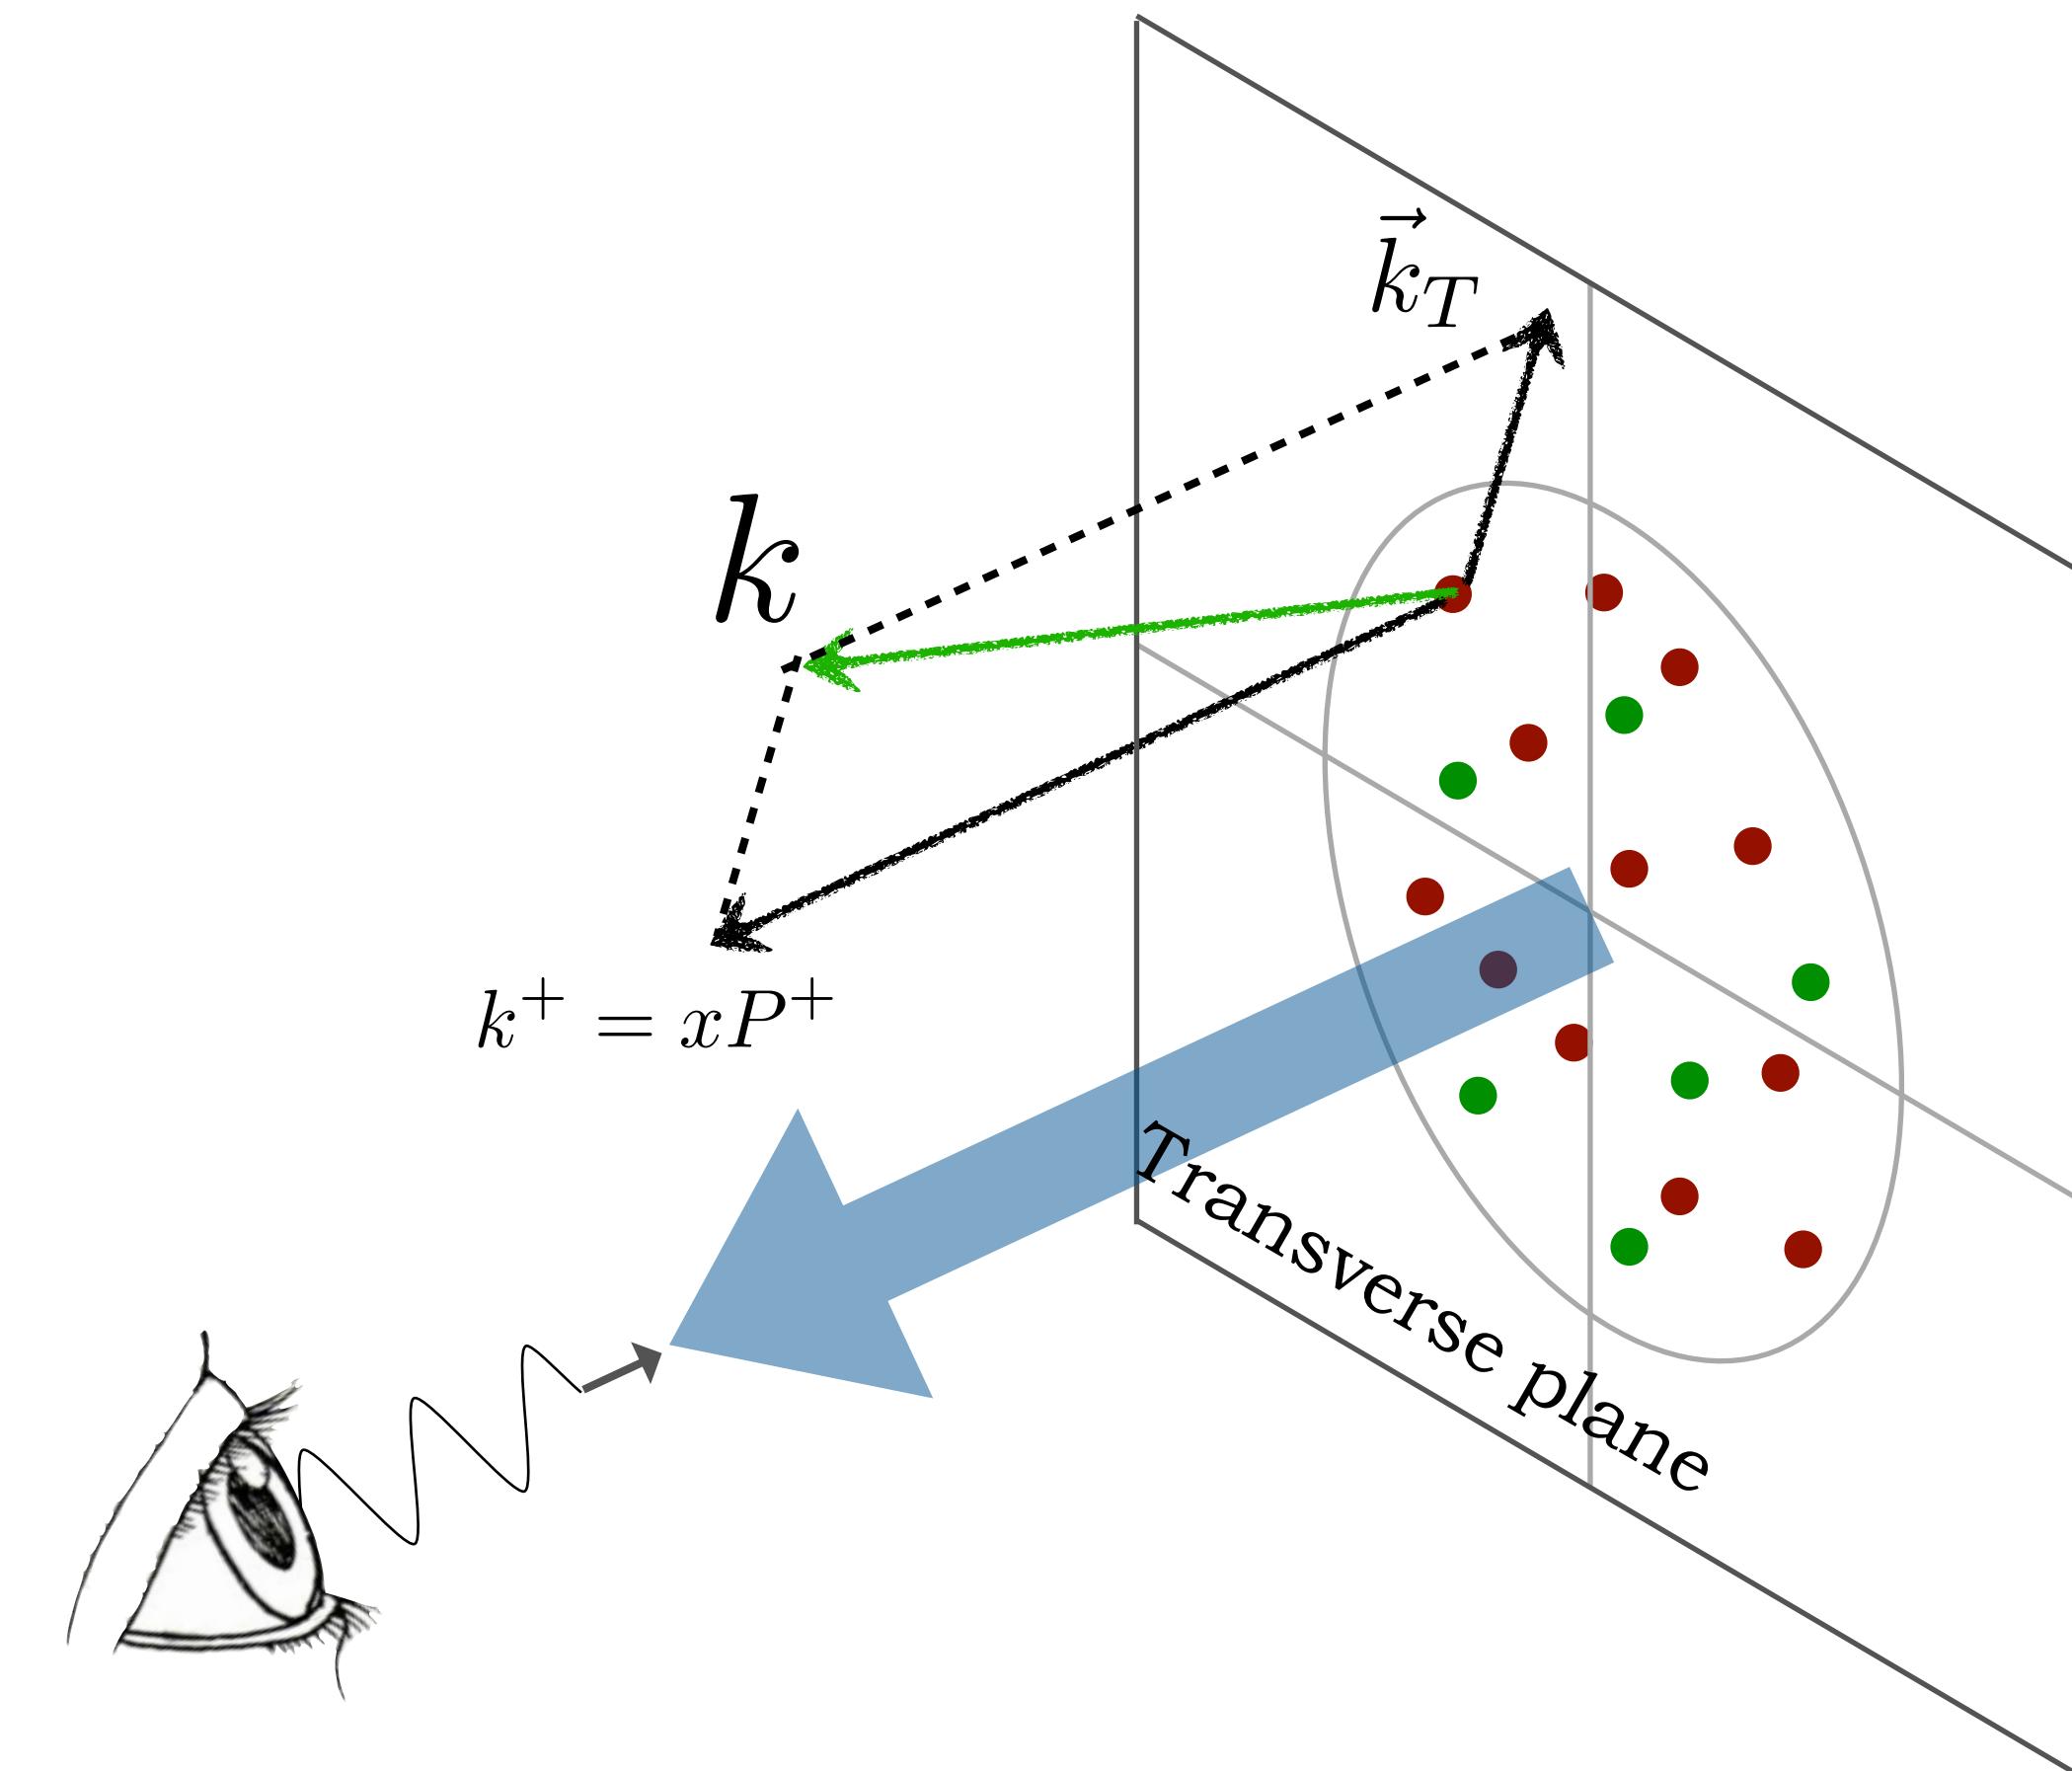

\vec{k}_T = intrinsic (non-perturbative) transverse momentum of the quark

Transverse Momentum Distribution PDFs

3-dimensional map of the internal structure of the nucleon $f(x, \vec{k}_T)$

		Quark Polarisation		
		U	L	T
U		f_1		h_1^\perp
L			g_1	h_{1L}^\perp
T		f_{1T}^\perp	g_{1T}	$h_1 h_{1T}^\perp$

Time-reversal odd Time-reversal even

\vec{k}_T = intrinsic (non-perturbative) transverse momentum of the quark

Transverse Momentum Distribution PDFs

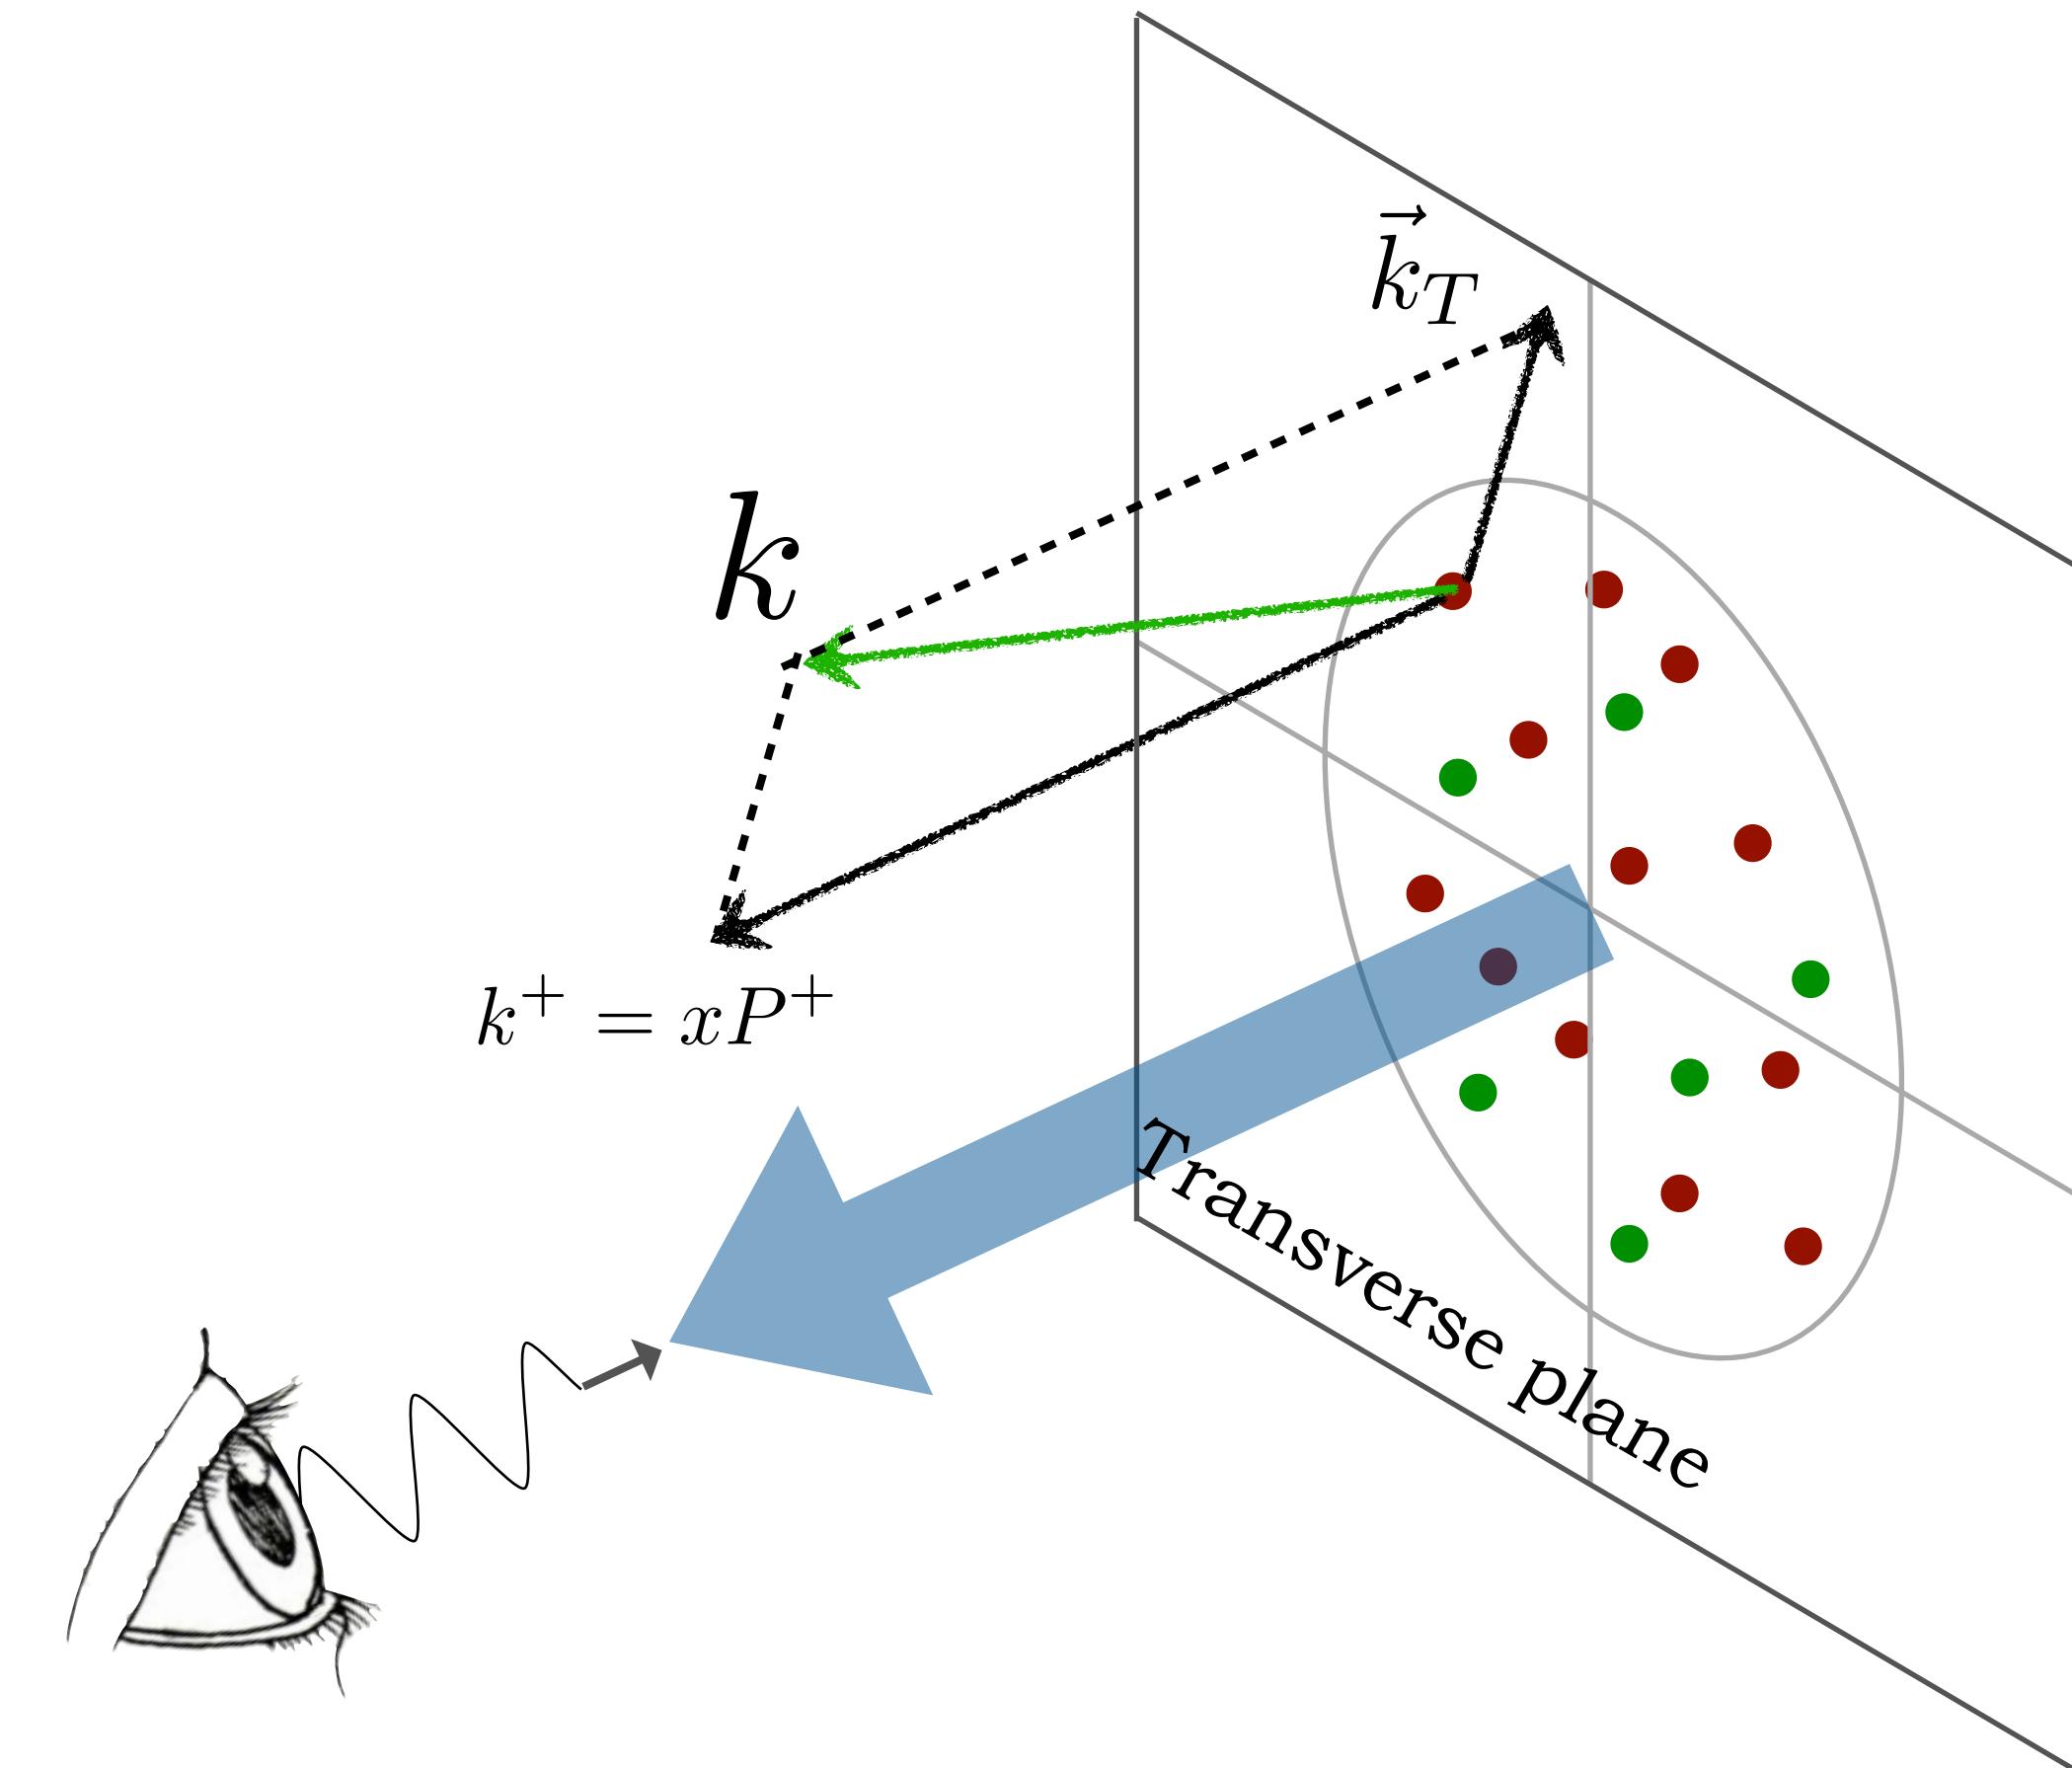

TMDs map the distribution of partons inside the nucleon in 3D in momentum space.

They can be extracted through global fits
There are attempts to calculate them in lattice QCD

Transverse Momentum Distribution PDFs

3-dimensional map of the internal structure of the nucleon $f(x, \vec{k}_T)$

		Quark Polarisation		
		U	L	T
Nucleon Pol.	U	f_1		h_1^\perp
	L		g_1	h_{1L}^\perp

A new extraction of proton quark unpolarized TMDs

A new extraction of proton quark unpolarized TMDs

- Global analysis of Drell-Yan and Semi-Inclusive DIS data sets: **2031** data points

A new extraction of proton quark unpolarized TMDs

- Global analysis of Drell-Yan and Semi-Inclusive DIS data sets: **2031** data points
- Perturbative accuracy: N^3LL^-

A new extraction of proton quark unpolarized TMDs

- Global analysis of Drell-Yan and Semi-Inclusive DIS data sets: **2031** data points
- Perturbative accuracy: N^3LL^-
- Number of fitted parameters: **21**

A new extraction of proton quark unpolarized TMDs

- Global analysis of Drell-Yan and Semi-Inclusive DIS data sets: **2031** data points
- Perturbative accuracy: $N^3 LL^-$
- Number of fitted parameters: **21**
- Extremely good description: $\chi^2/N_{\text{data}} = 1.06$

Main differences with SV19

Main differences with SV19

- Different implementation of TMD evolution

Collins-Soper-Sterman vs zeta-prescription

Main differences with SV19

- Different implementation of TMD evolution

Collins-Soper-Sterman* vs *zeta-prescription

- Different choice of non-perturbative functional form

21 parameters* vs *11 parameters

Main differences with SV19

- Different implementation of TMD evolution

Collins-Soper-Sterman* vs *zeta-prescription

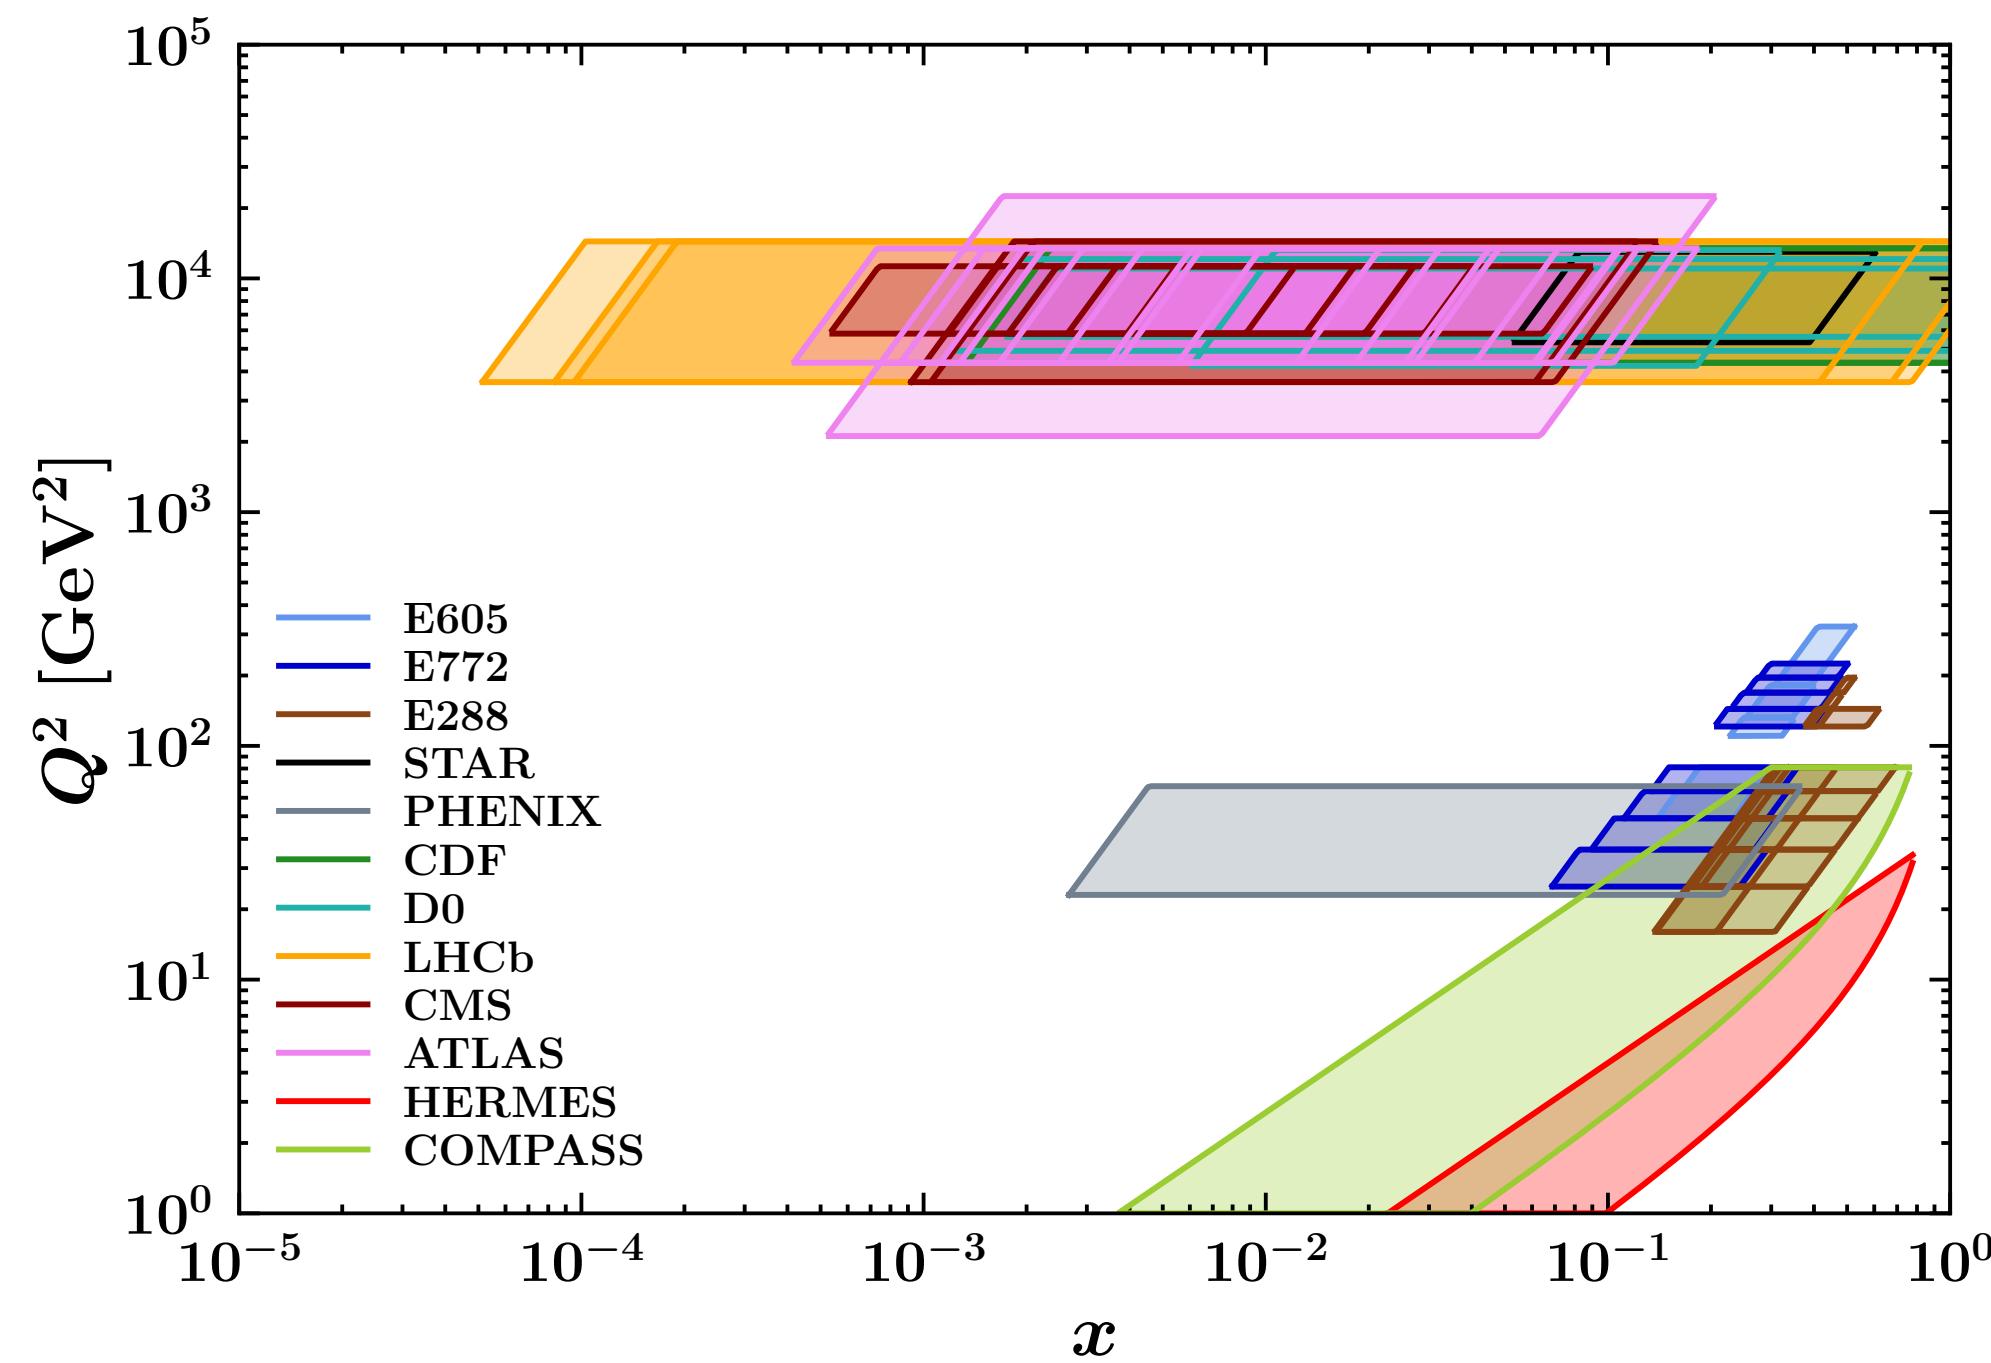

- Different choice of non-perturbative functional form

21 parameters* vs *11 parameters

- Different criteria of data selection

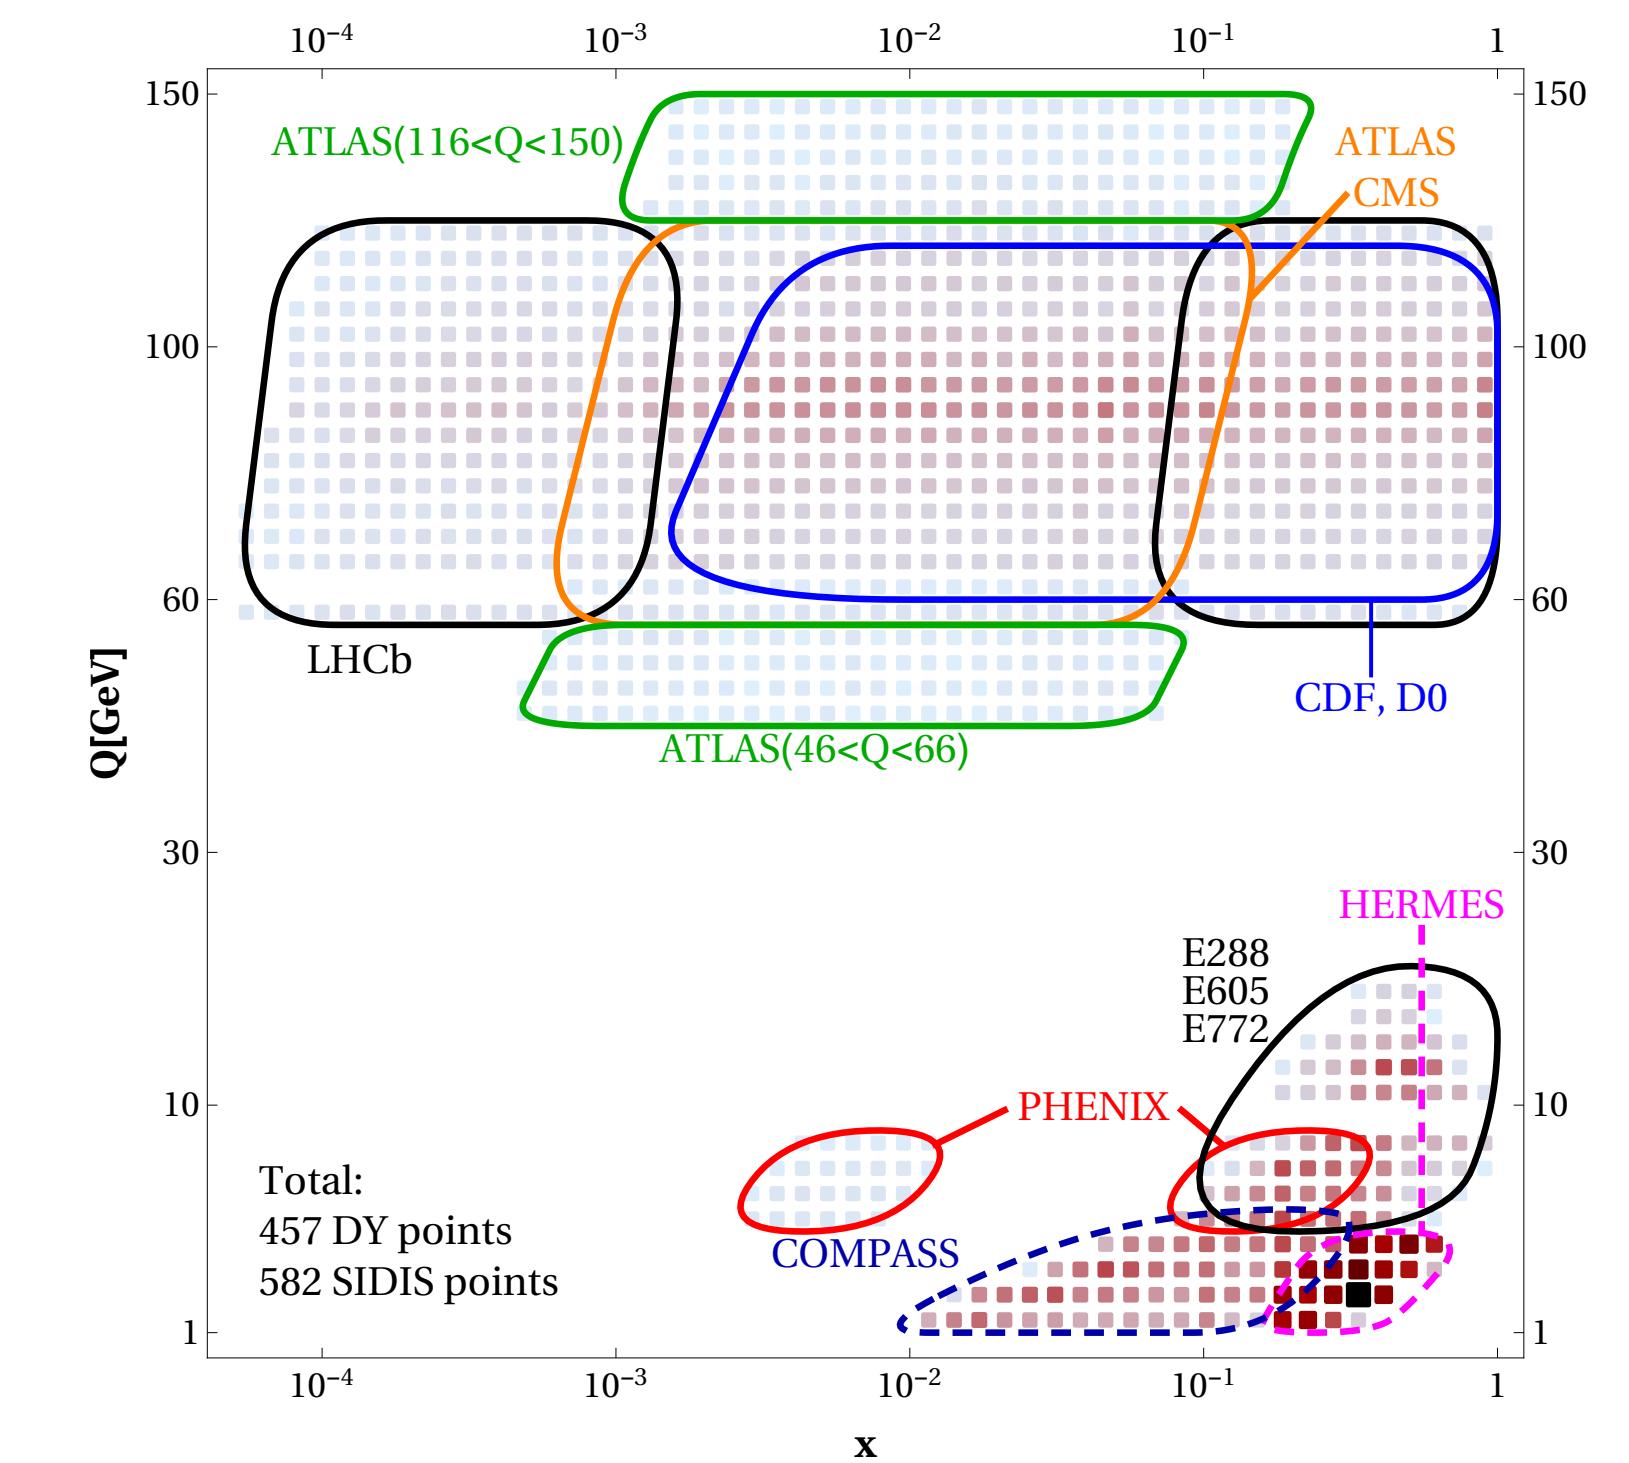

Comparison included datasets

MAPTMD22

484(DY) + 1547(SIDIS) = 2031 fitted data

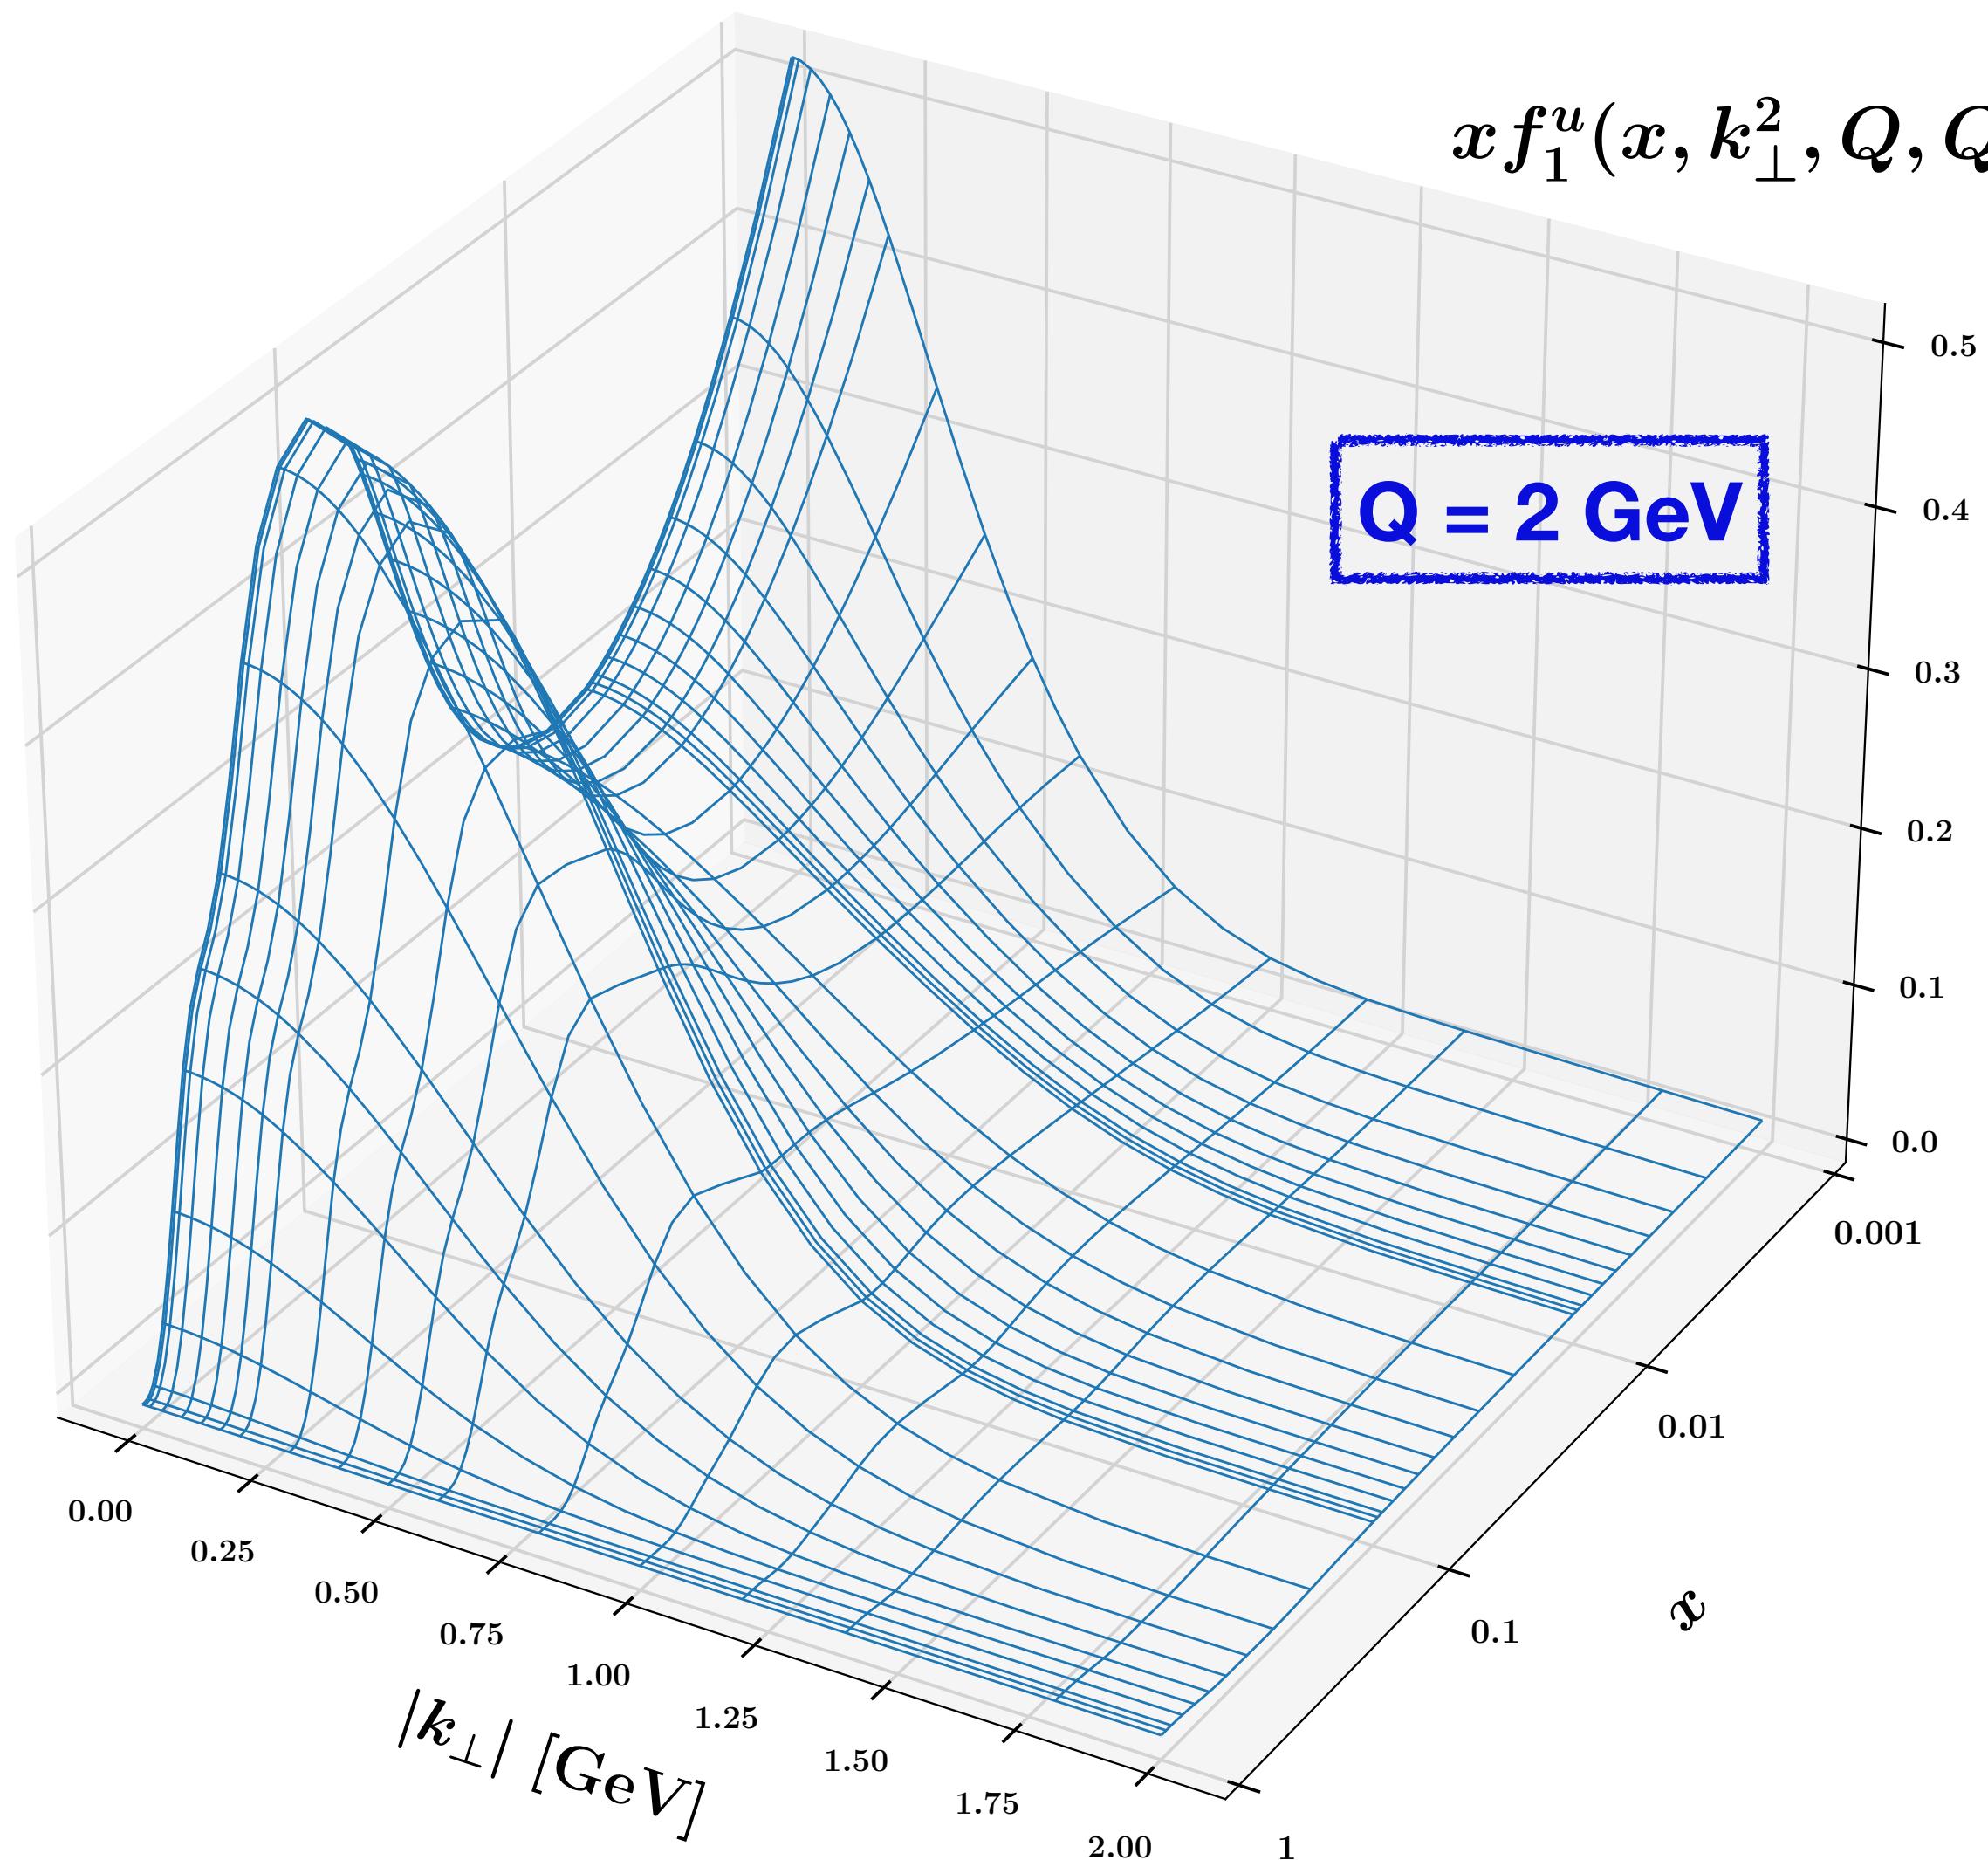

SV19

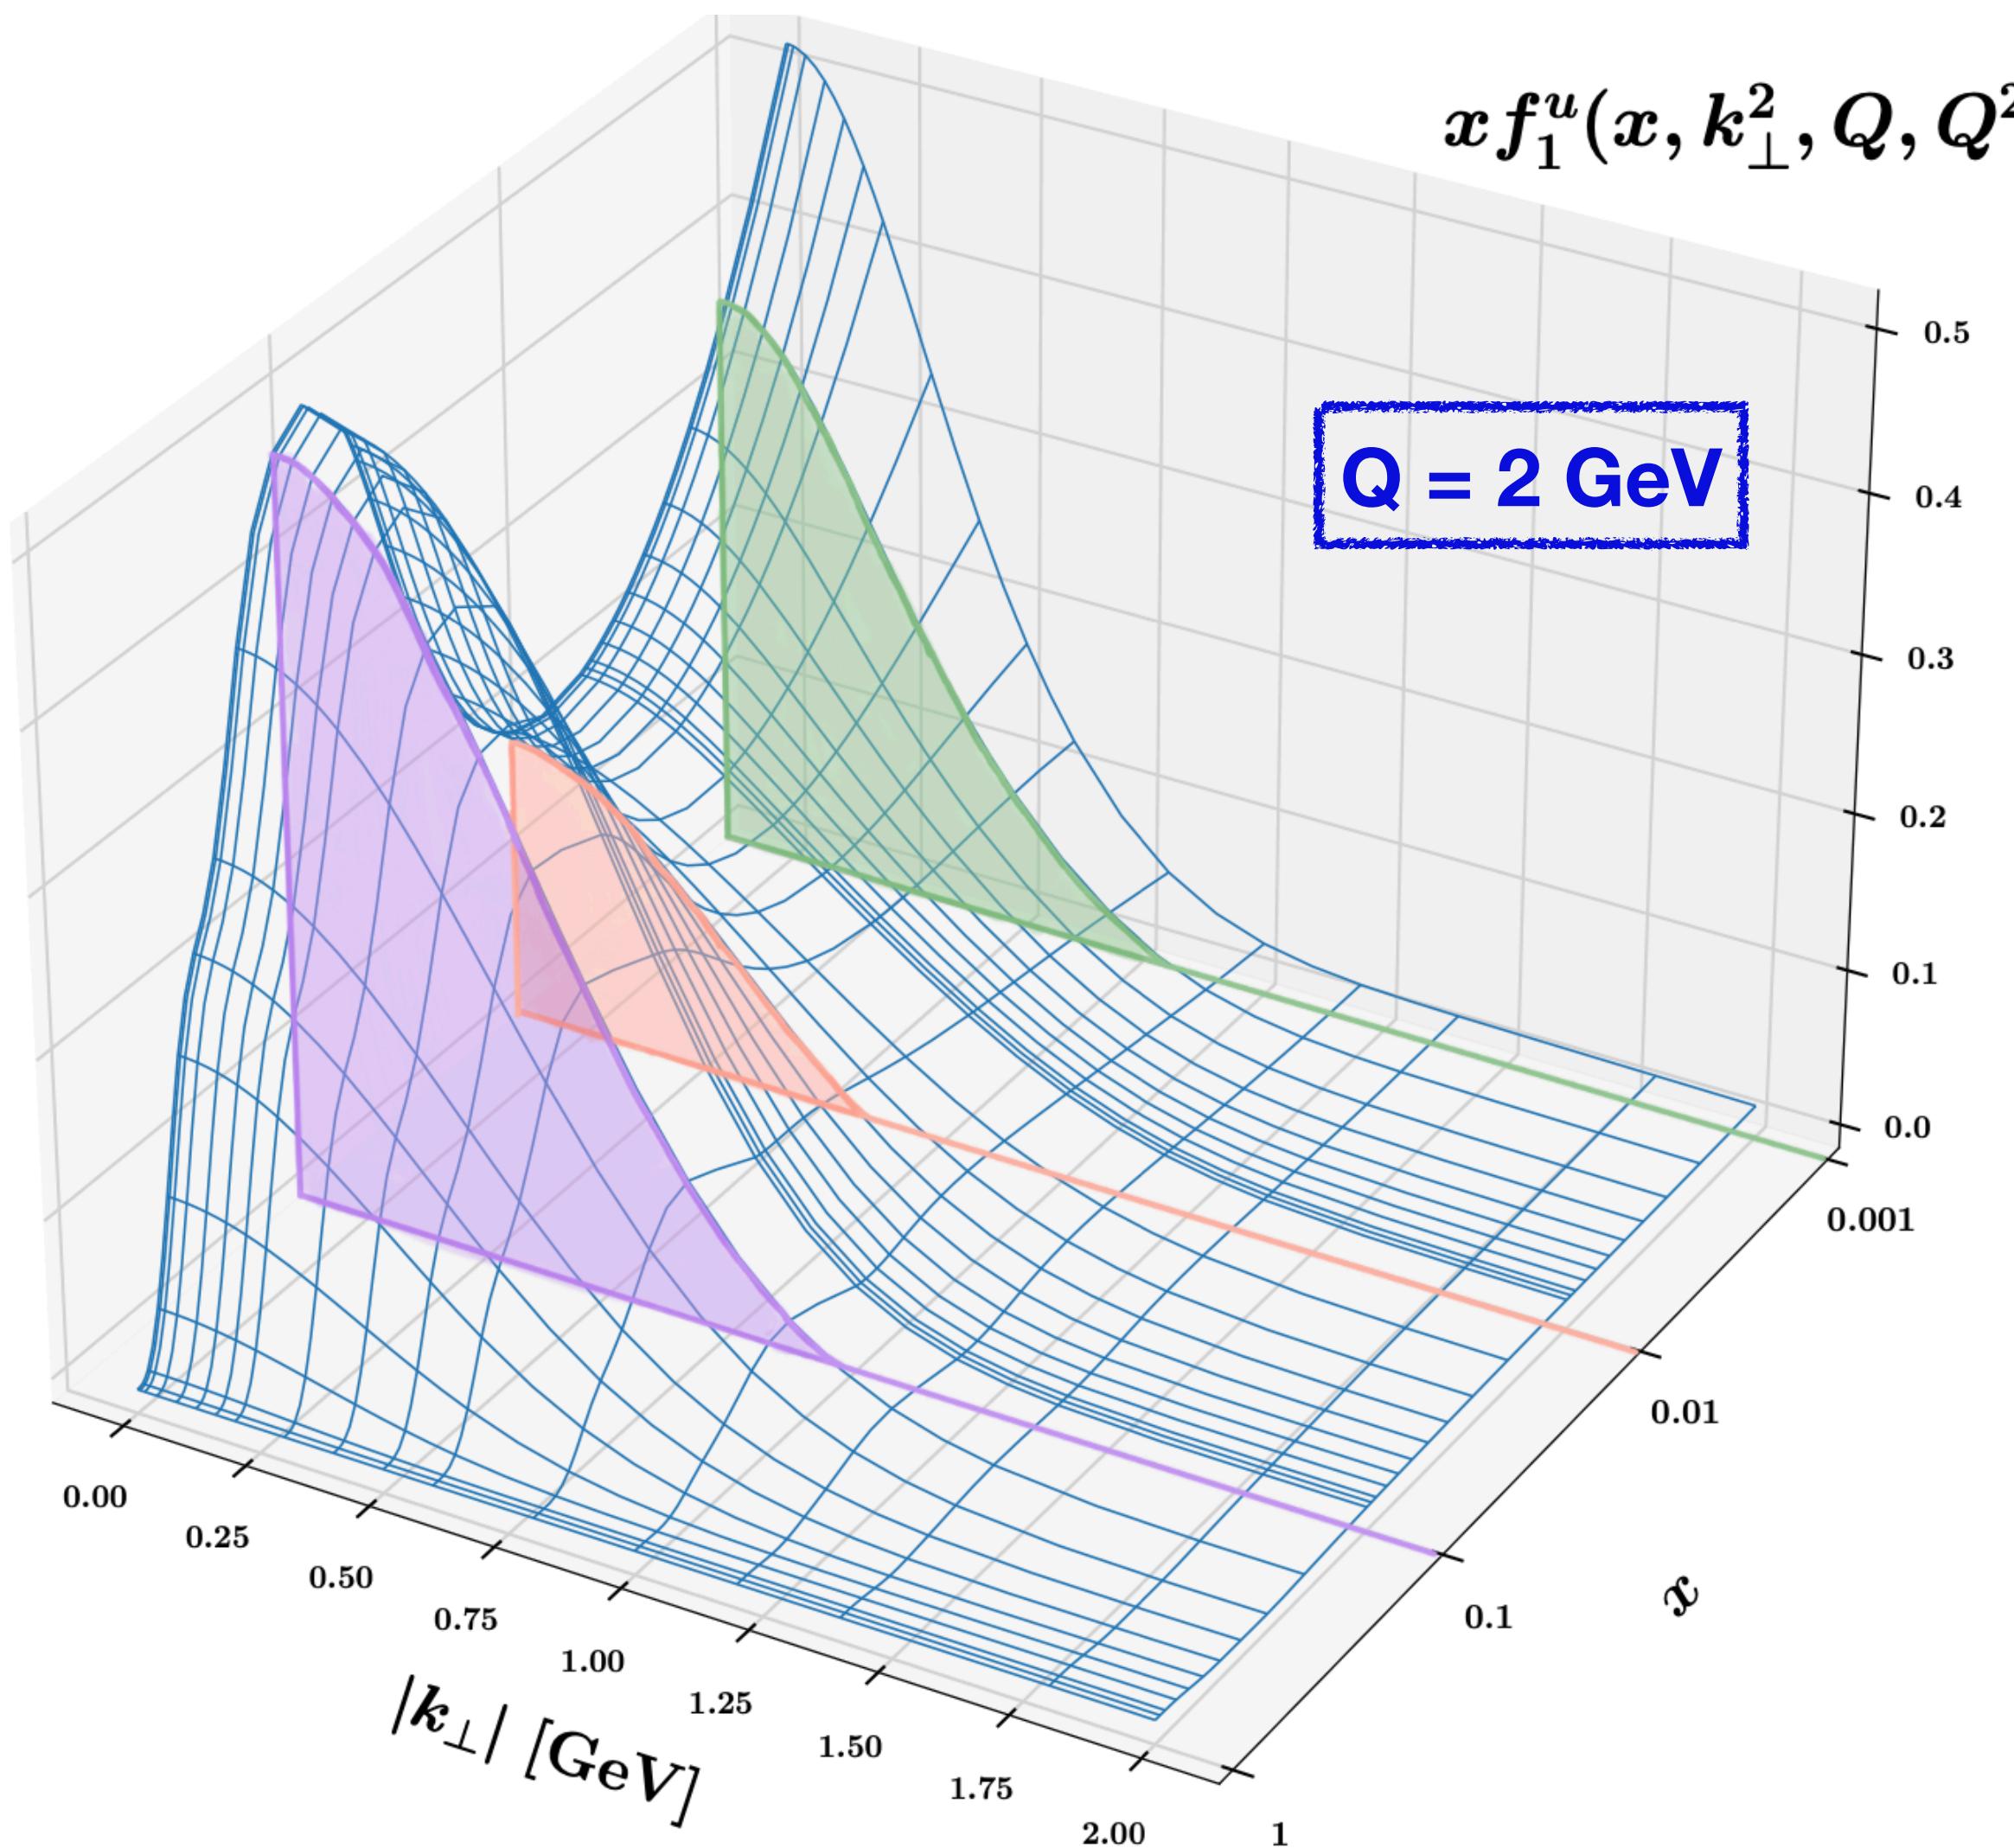

457(DY) + 582(SIDIS) = 1039 fitted data

Conclusions and outlooks

Conclusions and outlooks

- **MAPTMD22** is the most recent extraction of unpolarized quarks TMDs in the PROTON from a global fit. It seems in agreement with other extractions.

Conclusions and outlooks

- ***MAPTMD22*** is the most recent extraction of unpolarized quarks TMDs in the PROTON from a global fit. It seems in agreement with other extractions.
- ***MAPTMDPion22*** is the first extraction of the MAP Collaboration of unpolarized quarks TMDs in the Pion from a fit of pion-induced Drell Yan.

Conclusions and outlooks

- **MAPTMD22** is the most recent extraction of unpolarized quarks TMDs in the PROTON from a global fit. It seems in agreement with other extractions.
- **MAPTMDPion22** is the first extraction of the MAP Collaboration of unpolarized quarks TMDs in the Pion from a fit of pion-induced Drell Yan.
- ▲ **Pion TMDs** are an almost unexplored field.
